- THANK YOU

Welcome
in TOPIX

You ask a spectator to go to the royalty-free image search site and do an image search on a theme of their choice.

After choosing an image visually, without clicking on it, you will be able to guess its image, or even draw it.

TOPIX is not really an application, but rather a site (openpix.art) which appears normal to spectators. In fact, it's full of tips for pretending to be a mind reader. We use the Pixabay API to retrieve images as well as image tags.

Each TOPIX user will define a **synchronization word** which will link the spectator's phone with your TOPIX account.

There are two possibilities to know the image chosen by the spectator:

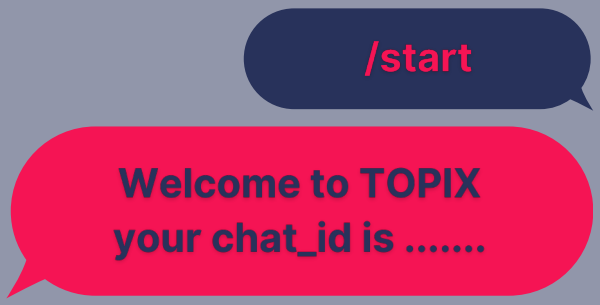

- **The reclassification technique:** The spectator will stop scrolling on their image. Several images will be displayed on the screen. After a few seconds, a pop-up window will appear requesting consent to use cookies. While this window is displayed, the background images are reordered so that they are more visible together. The spectator then returns to their image and, after a few seconds, you receive the image.
- **The Touched Image:** As soon as the spectator touches an image, you receive it.

Configuration
SYNC & NOTIFICATIONS

Notification

To receive the information, you will need a Telegram account. Here are the steps to configure TOPIX quickly and easily:

- Download Telegram on your Android or iPhone device. It is a free application.
- Once installed, **subscribe to the TOPIX bot** by visiting this link and sending the **/start** command. In response, you will receive your **Telegram chat ID**, which you will need to copy.
- Then return to the TOPIX configuration page.
- In the "*Sync and Notifications*" section, **paste your Telegram chat ID** into the field provided.

Synchronisation

- Now **choose two connecting words**. You can also associate a search with each connection word. For example, if your login word is "red airplane," you can opt for a simple search like "airplane." If you leave the field empty, the search will be for "red plane".
- Note that **the spectator's phone remains connected for 15 minutes** after syncing with your account.
- To log out during testing, go to the openpix.art menu and click on "*Privacy*". Likewise, to disconnect the spectator, all you have to do is make them like any image.

Settings

Here are the settings for the spectator's browser

Scroll Pause Time: This setting determines how long you wait before the cookie window appears. For example, if you set it to 5, the cookies window will appear after 5 seconds of inactivity in scrolling.

Popup Auto Cookies: This automatically activates the cookie trick as soon as the spectator enters their own theme. If this setting is deactivated, the spectator will have to click on the pink arrow at the bottom right to activate image detection using the cookies window.

Send the Chosen Image: The image selected by the spectator via the cookie technique is sent to Telegram.

Send Touched Image: The image that the spectator touches is sent to Telegram.

Send Tags: Image tags are sent to Telegram.

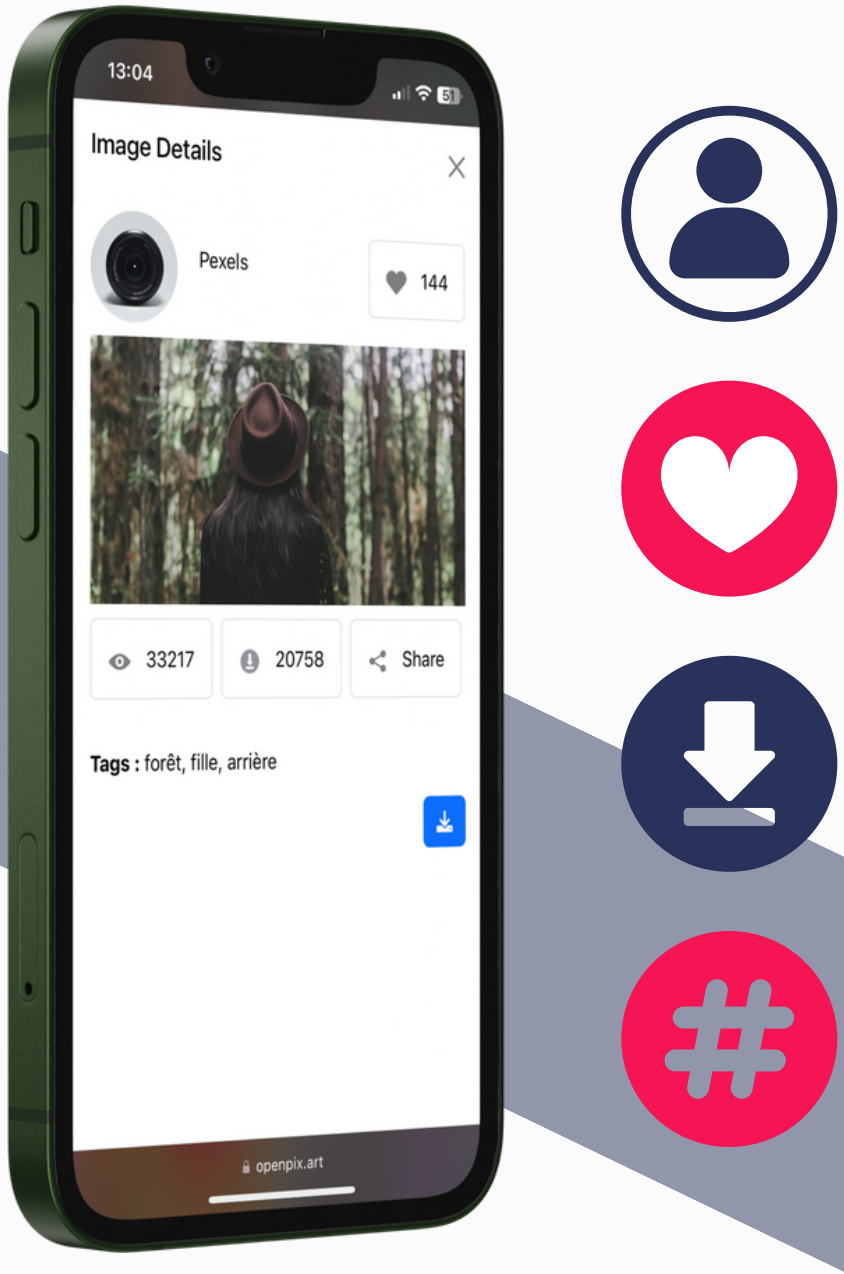

Topix On: Turns your sync words on or off.

Feel free to adjust these settings according to your preferences for an optimal experience

Force
the contents

The force content function allows you to select the name of the photographer, the number of likes, the number of downloads, as well as the tags associated with an image.

You have forcing by theme and global forcing accessible via the cookies window.
It is important to complete all fields if you want to use the forcing function.

API
& TOOLS

Base API

The basic API allows you to retrieve several pieces of information in JSON format.

Here are the fields used:
- Word: the word typed by the spectator.
- Tags: the tags corresponding to the chosen image.
- imageUrl: the URL of the chosen image.
- alldata: everything combined except the image URL.

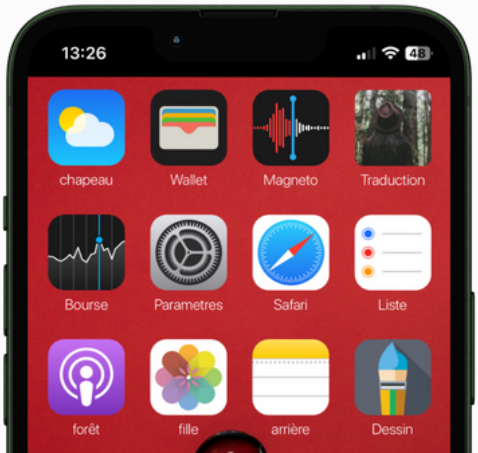

WEBPEEK URL

The WEBPEEK URL allows you to receive information on an Apple Watch, for example. Just open the URL on Apple Watch and start the update.

Applications ANDROID & IOS PEEK

These are two web applications to install on your phone to receive information on a fake iOS or Android desktop or via a fake Drawing application.
- The word appears under the icon at the top left. The image in the icon at the top right. The tags under the applications in the penultimate line.
- It is also a web application which allows you to receive information and superimpose the chosen image in order to be able to draw over it.

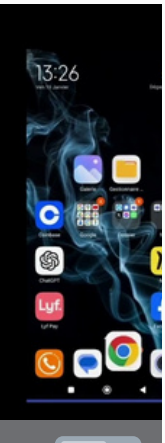

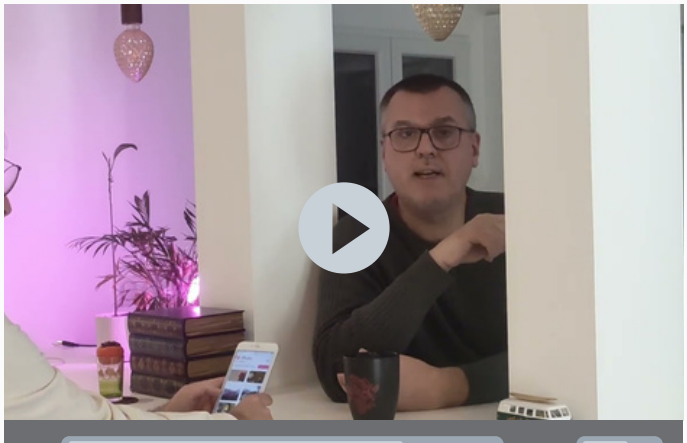

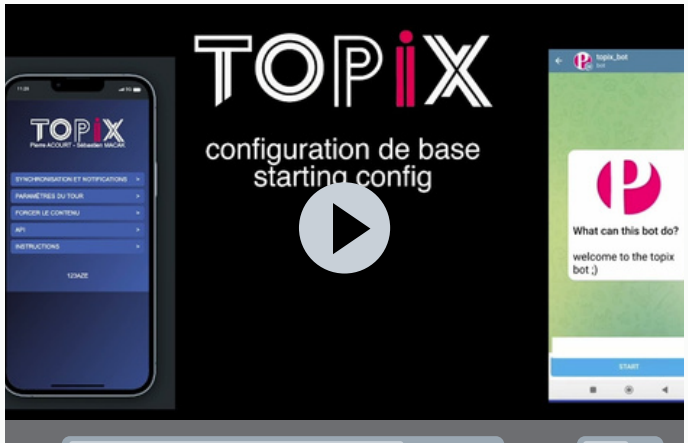

To go **further**

In this manual, we have quickly presented the essential settings to give you an overview of the application and configurations.

However, for a deeper understanding and to take full advantage of TOPIX, **we strongly encourage you to view the explanatory videos** available on our website.

THANKS

Dear TOPIX users,

We would like to express our deep gratitude to each of you who have chosen to acquire TOPIX. Your support and trust are essential to growing our community and continually improving our app.
Thanks to you, TOPIX continues to evolve, innovate and create unique experiences.

Feel free to explore all the features of TOPIX and share your creations with the world. Together we are building something special!
Once again, thank you for your valuable support. We look forward to surprising you with new features and supporting you on your creative adventure.
